

## Anti-fatigue mats

**Exelia is the ideal anti-fatigue flooring solution for stand-up workstations in industrial environments.**

Working activities that require prolonged periods in the upright position require an anti-fatigue flooring able to cushion the impact of the feet against the ground. Exelia will help you maximize productivity by boosting the energy of the workforce. The anti-fatigue areas can be put together with Exelia ST in the presence of heavy load traffic or Exelia LW in the presence of light load and pedestrian traffic.

ANTI-SHOCK

ANTI-SLIP

HEAVY-DUTY

## Color-coded workspace and area markings

**Thanks to the wide range of color options, Exelia allows you to color-code different activity areas.**

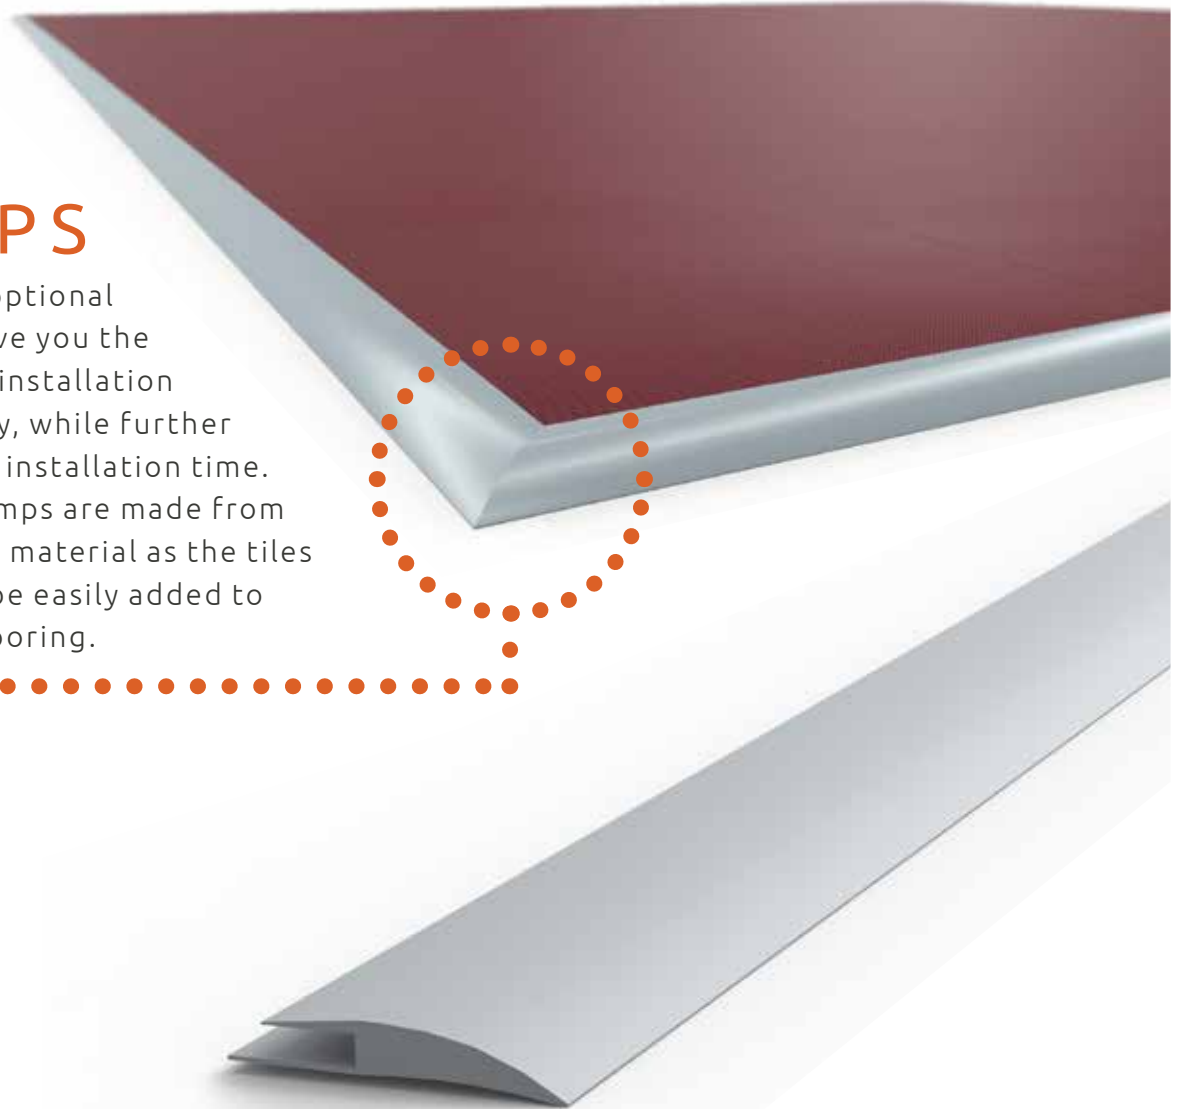

Color-coded work zones will be fade-proof thanks to the durability of Exelia tiles. Pedestrian walk paths and traffic lanes can be easily put together with the advantage of having customized fade-proof markings built onto the flooring, as well. The ease and flexibility of the installation will allow you to reconfigure activity areas whenever needed.

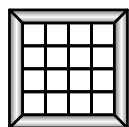

MSS™ Interlocking System

## RAMP

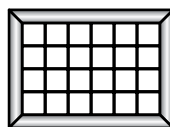

- Exelia's optional ramps give you the maximal installation flexibility, while further reducing installation time.
- These ramps are made from the same material as the tiles and can be easily added to Exelia flooring.
